AKHIL V S

Senior Software Engineer | Full Stack Engineer (Flutter & FastAPI & React & PostgreSQL & Docker & AWS & Azure) | Java | Android | Firebase | HTML | CSS | Javascript | RESTAPI | Python |
Thrissur, Kerala, India

Summary

I am a Senior Software Engineer and Full-Stack Architect with about 8.5+ years of experience building high-performance applications. While my roots are in cross-platform mobile development (Flutter), I have expanded my expertise to engineer end-to-end scalable systems, integrating React frontends with Python (FastAPI) backends and cloud-native infrastructure.Currently, I lead the development of AI-powered applications, bridging the gap between intuitive user experiences and complex backend logic. I specialize in translating business requirements into production-ready software, architecting robust systems using Clean Architecture, BLoC, and MVVM, and ensuring seamless deployments via CI/CD pipelines.Core Competencies:1. Full-Stack Development: Expert in Flutter (Mobile/Web), React (Web), and FastAPI (Backend).2. Cloud & DevOps: Proficient in Multi-Cloud environments (AWS & Azure), Containerization (Docker), and Serverless deployment.3. AI Integration: Experience integrating Generative AI (LLMs) and prompting strategies into consumer-facing apps.4. Engineering Leadership: Deep involvement in the full SDLC, from requirement gathering to code reviews and release management in both mobile and web applications.My Philosophy: I am driven by intellectual curiosity and the challenge of "unsolvable" problems. I view software engineering not just as coding, but as strategic problem-solving. Whether it is debugging a complex race condition or researching a new architectural pattern, I am relentless in finding the most efficient, scalable solution.Education: I hold a Master of Computer Applications (MCA), which has formalized the extensive practical knowledge I gained as a self-taught engineer. This advanced degree complements my undergraduate background in Mechanical Engineering (B.Tech), allowing me to approach software architecture with a rigorous, engineering-first mindset..

Experience

Lektik
Senior Software Engineer
September 2023 - Present (2 years 11 months)
Infopark, Kakkanad

As a Senior Software Engineer at Lektik Consultancies, I specialize in developing and maintaining high-performance Flutter applications for both iOS and Android platforms. I've led the development of AI-driven projects, including a biography generation platform and an intelligent sports betting app—delivered on both mobile and web. My responsibilities span the full development lifecycle: from requirement analysis and architecture design to UI implementation, performance optimization, and deployment.

In my role, I collaborate closely with backend teams to integrate RESTful APIs using FastAPI, ensuring smooth data interactions and end-to-end functionality. I actively participate in code reviews, maintain modular architecture for large-scale projects, and address performance and compatibility issues across devices. I also work with HTML, CSS, Git, Kotlin, and Java, contributing to the fullstack development process.

With over 3.5 years of experience in mobile development—including more than 2 years with Flutter—I have a deep understanding of Flutter's architecture, rendering engine, and native integration via MethodChannel. I am continuously exploring emerging technologies to enhance product quality and performance. Known for being highly accountable and a strong team player, I take pride in delivering clean, maintainable code and user-centric solutions.

Reubro International
Flutter Developer
April 2022 - August 2023 (1 year 5 months)
Ernakulam

Lead flutter developer / Android developer. During my tenure in this company I have learned a lot about Mobile applications, Web applications, Flutter, Java and Kotlin applications. Made and collaborated on a lot of projects including E-commerce, Employee management, Social media, Health Care etc.

D Consultancy
Software Engineer
December 2016 - March 2022 (5 years 4 months)
Kerala, India

Makes Android Applications in Java, Kotlin - Aasadhara (govt project), KMRL (for Kochi Metro businesses)

Education

Indira Gandhi National Open University

Master of Computer Applications - MCA · (February 2022 - July 2025)

University of Calicut

Bachelor of Technology (BTech), Mechanical Engineering · (2012 - 2016)

Sree Narayana Higher Secondary School

Plus 2, Biology Science · (2010 - 2012)

St Mary's Higher Secondary School

10th, Kerala State Syllabus · (2009 - 2010)
