SUMMARY

Senior Software Engineer and Flutter Developer with 5+ years shipping cross-platform mobile and web applications for Android, iOS, and Web using Flutter and Dart across healthcare, artificial intelligence (AI), e-commerce, and enterprise domains. Architected an AI-powered clinical documentation platform processing 15,000+ submissions per month for a U.S. government healthcare service, achieving SOC 2 compliance and a 53% performance improvement, and reduced application crash rates by 30% through performance optimization and crash analytics. Skilled in BLoC, Provider, Riverpod, and GetX state management, REST API and Firebase integration, CI/CD with GitHub Actions and Codemagic, AWS/Azure, and mentoring junior developers in Agile teams.

EXPERIENCE

Senior Software Engineer | Lektik Consulting

September 2023 - Present, Infopark, Kakkanad, Kerala

- Develop and maintain Flutter applications for Android, iOS, and Web platforms for healthcare, AI-powered documentation, and enterprise workflow products.
- Ship production features including speech recognition, AI-generated clinical documentation, REST API integrations, Firebase services, AppsFlyer, payment flows, and cloud-based infrastructure.
- Design scalable app architecture using BLoC and Provider state management, establish CI/CD workflows with GitHub Actions, and mentor junior developers through code reviews, technical guidance, and Agile collaboration.

Flutter Developer | Reubro International

April 2022 - August 2023, Kochi, Kerala

- Delivered Flutter applications for social, e-commerce, job search, and web platforms across Android, iOS, and Web.
- Integrated REST APIs, Firebase services, BigCommerce, and third-party platforms, and established CI/CD pipelines with GitHub Actions to improve release efficiency.
- Reduced application crash rates by 30% through performance optimization, crash analytics monitoring, bug fixing, and maintenance of legacy Android applications built with Java and Kotlin.

Software Consultant | Freelance

January 2021 - March 2022, Remote

- Built a business management platform for dance and music academies covering student enrollment, attendance tracking, class scheduling, role-based access, and instructor management.
- Engineered payment workflows using Stripe, Apple In-App Purchase, and Google Play Billing, enabling subscriptions and multiple payment methods.
- Added notifications, reminders, and analytics-driven reporting to improve engagement and surface insights into revenue, attendance, and student activity.

PROJECT

CascadeMD | Lektik Consulting

dictate.cascade.md, November 2025 - Present

- Architected and delivered an AI-powered clinical documentation platform that converts dictated patient encounters into structured clinical records for submission to a U.S. government healthcare service, processing 15,000+ submissions per month.
- Achieved SOC 2 compliance by implementing secure healthcare workflows with speech recognition, AI-assisted documentation, role-based access, and reliable delivery of patient records to external healthcare systems.
- Improved application performance by 53% through usability, performance, and scalability enhancements across mobile and web platforms, reducing manual documentation effort for clinicians.

Seequince | Lektik Consulting

January 2026 - March 2026

- Debugged and refactored AI-generated code for a field workforce monitoring application tracking employee attendance, shift activity, and location compliance, improving code correctness by 30% and application performance by 20%.
- Implemented GPS geofencing and background location tracking to automatically terminate sessions when users move out of designated service areas.
- Integrated Firebase push notifications and scheduled background processes to deliver shift updates and continuously monitor location-based activity.

Sprinkle | Lektik Consulting

play.google.com/store/apps/details?id=com.lektik.sprinkle, July 2024 - November 2025

- Developed a cross-platform sports information application using Flutter, Clean Architecture, and modular state management, delivering a scalable, high-performance experience for 5,000+ users.
- Pioneered a backend-driven system for adding sports dynamically, decreasing development effort by 40% and crash rates by 32%, while integrating authentication, payments, and deep linking.

- Built location-aware and timezone-sensitive features, optimised application performance, integrated crash analytics and production monitoring, and resolved production issues to improve overall application reliability and user experience.

Narraited (Android/iOS/Web) | Lektik Consulting

app.narraited.com, August 2023 - May 2025

- Built a cross-platform AI-powered biography creation platform using Flutter, serving 1,000+ users with structured, chapter-based storytelling workflows across Android, iOS, and Web.
- Integrated speech recognition, audio recording and playback, multimedia support, push notifications, responsive UI, and secure authentication using Email, Google, and Apple Sign-In to deliver a seamless publishing experience.
- Optimised Azure cloud infrastructure, reducing monthly hosting costs from $941.85 to under $100 (90%+ cost reduction) without compromising application availability or performance.

Employee Management Application | Reubro International

October 2022 - September 2023

- Created an employee and employer management application covering attendance tracking, time-off requests, payroll workflows, announcements, and role-based access.
- Structured the codebase with GetX MVVM (Model-View-ViewModel), separating UI, business logic, and data layers for better maintainability.
- Added push notifications, calendar views, and admin/employee-specific workflows to improve usability and operational efficiency.

Ashadhara | Reubro International

October 2021 - December 2021

- Developed a secure Android application in Kotlin for a government health initiative, enabling health-related data collection through a simple questionnaire flow.
- Hardened the app with root detection, SSL pinning, code obfuscation, screenshot restrictions, and automatic closure on compromised devices.
- Designed an accessible questionnaire experience for users with limited digital literacy while meeting strict government security requirements.

Organization Management App | Freelance

January 2021 - December 2021

- Built a business management platform for dance and music academies, streamlining student enrollment, attendance, class scheduling, instructor management, and payments.
- Implemented role-based access and secure payment workflows using Stripe, Apple In-App Purchase, and Google Play Billing, including subscription support.
- Delivered analytics, reporting, notifications, and reminder systems to improve visibility into revenue, attendance, student activity, and engagement.

EDUCATION

Master of Computer Applications | Indira Gandhi National Open University

Delhi, 2026

Bachelor of Technology in Mechanical Engineering | Universal Engineering College

Vallivattom, Kerala, 2016

SKILLS

- **Architecture & System Design:** End-to-end system design (UI → API → DB → AI), Agile development with Jira and Trello.
- **Frontend & UI Development:** Flutter (Mobile, Web, Desktop), Dart, React + TailwindCSS, Android (Jetpack Compose), HTML, CSS, multi-step forms & SPA dashboards, custom animations (Rive, Lottie), responsive layouts, design systems, Figma.
- **Backend & APIs:** Python, FastAPI, REST APIs (Application Programming Interface), GraphQL, WebSockets.
- **Databases:** PostgreSQL design and integration, AWS RDS (PostgreSQL), Firebase, local storage (Hive, Shared Preferences, sqflite).
- **Cloud & DevOps:** AWS (ECS Fargate, ECR), Docker, Microsoft Azure (Web Apps, Container Registry, App Service), CI/CD (Continuous Integration/Continuous Deployment) via GitHub Actions and Codemagic, Git, GitHub, GitLab, GitHub Pages.
- **AI Integration:** Gemini and OpenAI large language model (LLM) integration and prompt handling, running open-source models locally.
- **Security & Configuration:** SOC 2 compliance, JWT authentication, OAuth (Google/Apple Sign-In), AWS SSM (secrets & environment), secure storage, SSL pinning, root detection and handling, permissions handling.
- **Flutter Architecture & Enhancements:** Provider, Riverpod, BLoC, GetX, app localization (i18n), push notifications (Firebase Cloud Messaging), in-app purchases/subscriptions, deep linking, app lifecycle management, geocoding, geofencing, geolocator.
- **Publishing & Analytics:** Firebase Crashlytics, AppsFlyer, Firebase App Distribution, TestFlight, Google Play Store, Apple App Store.
- **Tools & IDEs:** Android Studio, Visual Studio Code, PyCharm.
